

IT CONSULTING SERVICES

We've helped thousands of IT professionals from major corporate, government and education organizations achieve Microsoft Certification since 1997. Countless satisfied businesses and organizations also leverage our expertise by utilizing our IT Consulting Services.

Whether you have a small, mid-market or enterprise business, our team of highly skilled IT professionals will keep your technology moving forward. We offer hourly, project-based or consulting on retainer to increase efficiency, improve processes, solve problems and more.

Services Offered

- ✓ Network architecture design and implementation
- ✓ Active directory health checking, design and implementation
- ✓ Exchange architecture design and implementation
- ✓ SQL architecture design and implementation
- ✓ Virtualization architecture design and implementation

"I utilize Mountain View Systems for both technical training and consulting services. In either situation, I am more than satisfied with the results. I personally attend their technical training courses and I also send my entire technical staff to their facility as well. All that attend have nothing but positive experiences to share."

The City of Fort Collins has also secured Mountain View Systems for consulting services. This past year we asked for an assessment of a very complex, technical issue the City was facing. With James in-depth knowledge and technical expertise, he was able to identify our problem areas and make suggestion toward a better solution. The entire Mountain View staff is a pleasure to work with; they will always be my first choice for Training and Consulting Service's needs."

John Husted
City of Fort Collins MIS- Systems Manager

"I've hired a lot of consultants up and down the front range over the years. However, ever since getting to know James through his classes, I've come to realize his knowledge of Microsoft based networking systems is superior to anybody I've ever met."

James is my 'go to' guy for those deep seeded technical issues that nobody else can solve or if I need no-nonsense solid advice. Most recently, we had a tricky wireless engineering problem that could not be solved by anybody that looked at the problem. I decided to ask James to look at it and he was able to solve the problem on his own."
